

EVERY LEVEL BLOOMS AT NILA

I grow plants for many reasons: to please my eye or to please my soul, to challenge the elements or to challenge my patience, for novelty or for nostalgia, but mostly for the joy in seeing them grow.

- David Hobson, a Canadian gardening writer and columnist

THE ART OF THE VERTICAL HARDIN

WHAT IS TIERED GREENERY?

Tiered greenery is a design approach in which plants are arranged at multiple elevated levels rather than on a single flat surface. This technique maximizes usable green space, improves visual depth, and can aid in stormwater management.

Nature at Every Elevation

At Nila, tiered greenery is the art of growing upward, where nature ascends alongside architecture. Every level of Nila is touched by living green. This is not only landscaping as decoration, but as structure that breathes, blooms, and connects.

HOW NILA EMBRACES TIERED GREENERY

01

GROUND PLANE

Courtyard gardens and pathway borders feature native ground covers, flowering perennials, and shade-giving shrubs. This is the foundation of Nila's layered landscape.

02

RAISED PLANTERS

Elevated beds along the paseo and at building entrances bring greenery to waist and eye level without sacrificing walkable space.

03

TERRACE GARDENS

Each unit's private outdoor space is designed to support container planting and gardening, allowing residents to cultivate their own tier of the vertical hardin.

04

CASCADING FOLIAGE

Select areas feature plants designed to spill over edges, softening hard lines and turning necessary structures into living features.
